OBJECTIVE

To join a team of developers with a goal of making a difference through technology.

EXPERIENCE

Full-Stack Mobile & Web Developer at SpinSpire
Jacksonville, FL | December 2020-Present

MSA Insurance **(PL Umbrella Insurance Quote & Bind app):**

Project Includes:

- Digitization of quoting and binding of Main Street America Insurance's Personal Lines Umbrella policies.
- Creating Quoting algorithm by reverse engineering an existing, client-provided Excel spreadsheet that contains several business rules
- Creating front-end client application using:
    - ReactJS components, React hooks
    - State management with Redux
    - Javascript/ES6
    - Figma designs implemented with Material Design UI framework
    - Custom UI components
    - Multi Page Wizard with progress navbar
    - Business rules and input validation with Formik library
- OAuth2/PKCE authentication with Okta IdP
- PDF file generation on the browser client from large and complex templates filled out with customer data enter from UI
- JWT Authenticated utilization of client API's
    - Agent and Agency Information
    - Insurance policy lookup and prefilling of most UI fields
- Sending emails with attachments from browser utilizing email API
- Implementation of email API using PHP
- Interfacing with client team at daily SCRUM meetings to discuss progress, bugs, fixes, sprints, user stories, deployments, and releases utilizing Agile process.

SafelyYou **(React-Native Mobile Application):**

Project Includes:

- Developed a cross platform IOS/Android application for agent use to monitor dementia patients and related falls/fall prevention. Integrated and Leveraged SafelyYou's Api's in order to effectively build a lightweight and responsive user interface system.
- React Native to create one cross platform code base.
- Leveraged SafelyYou's internal Api's in order to build a responsive and User Friendly mobile application.
- Diagnose and fix bugs and performance bottlenecks for performance that feels native
- Utilized XCode to manage IOS builds and Archives
- Architect, built and maintained an excellent React Native application with clean code.
- Release applications to the Apple and Google Play stores.
- Work with native modules when required(such as react-native video player).
- Integrated Redux in order to Manage state Globally across the application.

Full-Stack Mobile & Web Developer

TitanUpFitness | Jacksonville, FL | May 2021-Present

Mobile App Developer
- Developed a mobile app that bundles both nutritional and exercise content generated by the gym. The user will be able to purchase a plan to view nutritional guides and ask a licensed nutritionist questions through a live feed. The user will also be able to watch various workouts from the trainers at any time through an API call to a server hosting the videos.
- Increased company profits by providing another resource for revenue for the gym, allowing the gym to expand access to customers since the application was designed for mobile use.
- Main Technologies: React Native for app creation, React, Metro for reloading without restarting dev, and built with Expo. I will add to this as I create it.

Portfolio:

Key Technologies I have done personal projects on:
- Javascript, HTML, CSS, Bootstrap, & SCSS.
- Svelte, React, Angular, NextJs, & Typescript.
- NodeJs, Express, Nodemon, & Axios.
- PostgresQL, Firebase, MongoDB, & Mongoose.
